TAYLOR: Texas — Samsung is expanding in Central Texas, with plans to add more land to its $17 billion semiconductor campus in Taylor and a proposal to build 11 new chipmaking facilities in the Austin area.
According to a report from Community Impact, the Taylor City Council recently approved adding two parcels of land at the site to its two tax increment reinvestment zones (TIRZs) that cover the area.
Taylor's city manager said Samsung purchased this land after the company and Gov. Greg Abbott announced Samsung would be building the Taylor facility last November.

Community Impact reports that the additional properties, located in the northeast and southeast portion of Samsung's campus, bring the total area for the two TIRZs to 1,268.23 acres.
The tech giant is also considering building 11 new chipmaking facilities in the Austin area, according to documents filed with the Taylor and Manor school districts that were posted on the Texas comptroller's website.

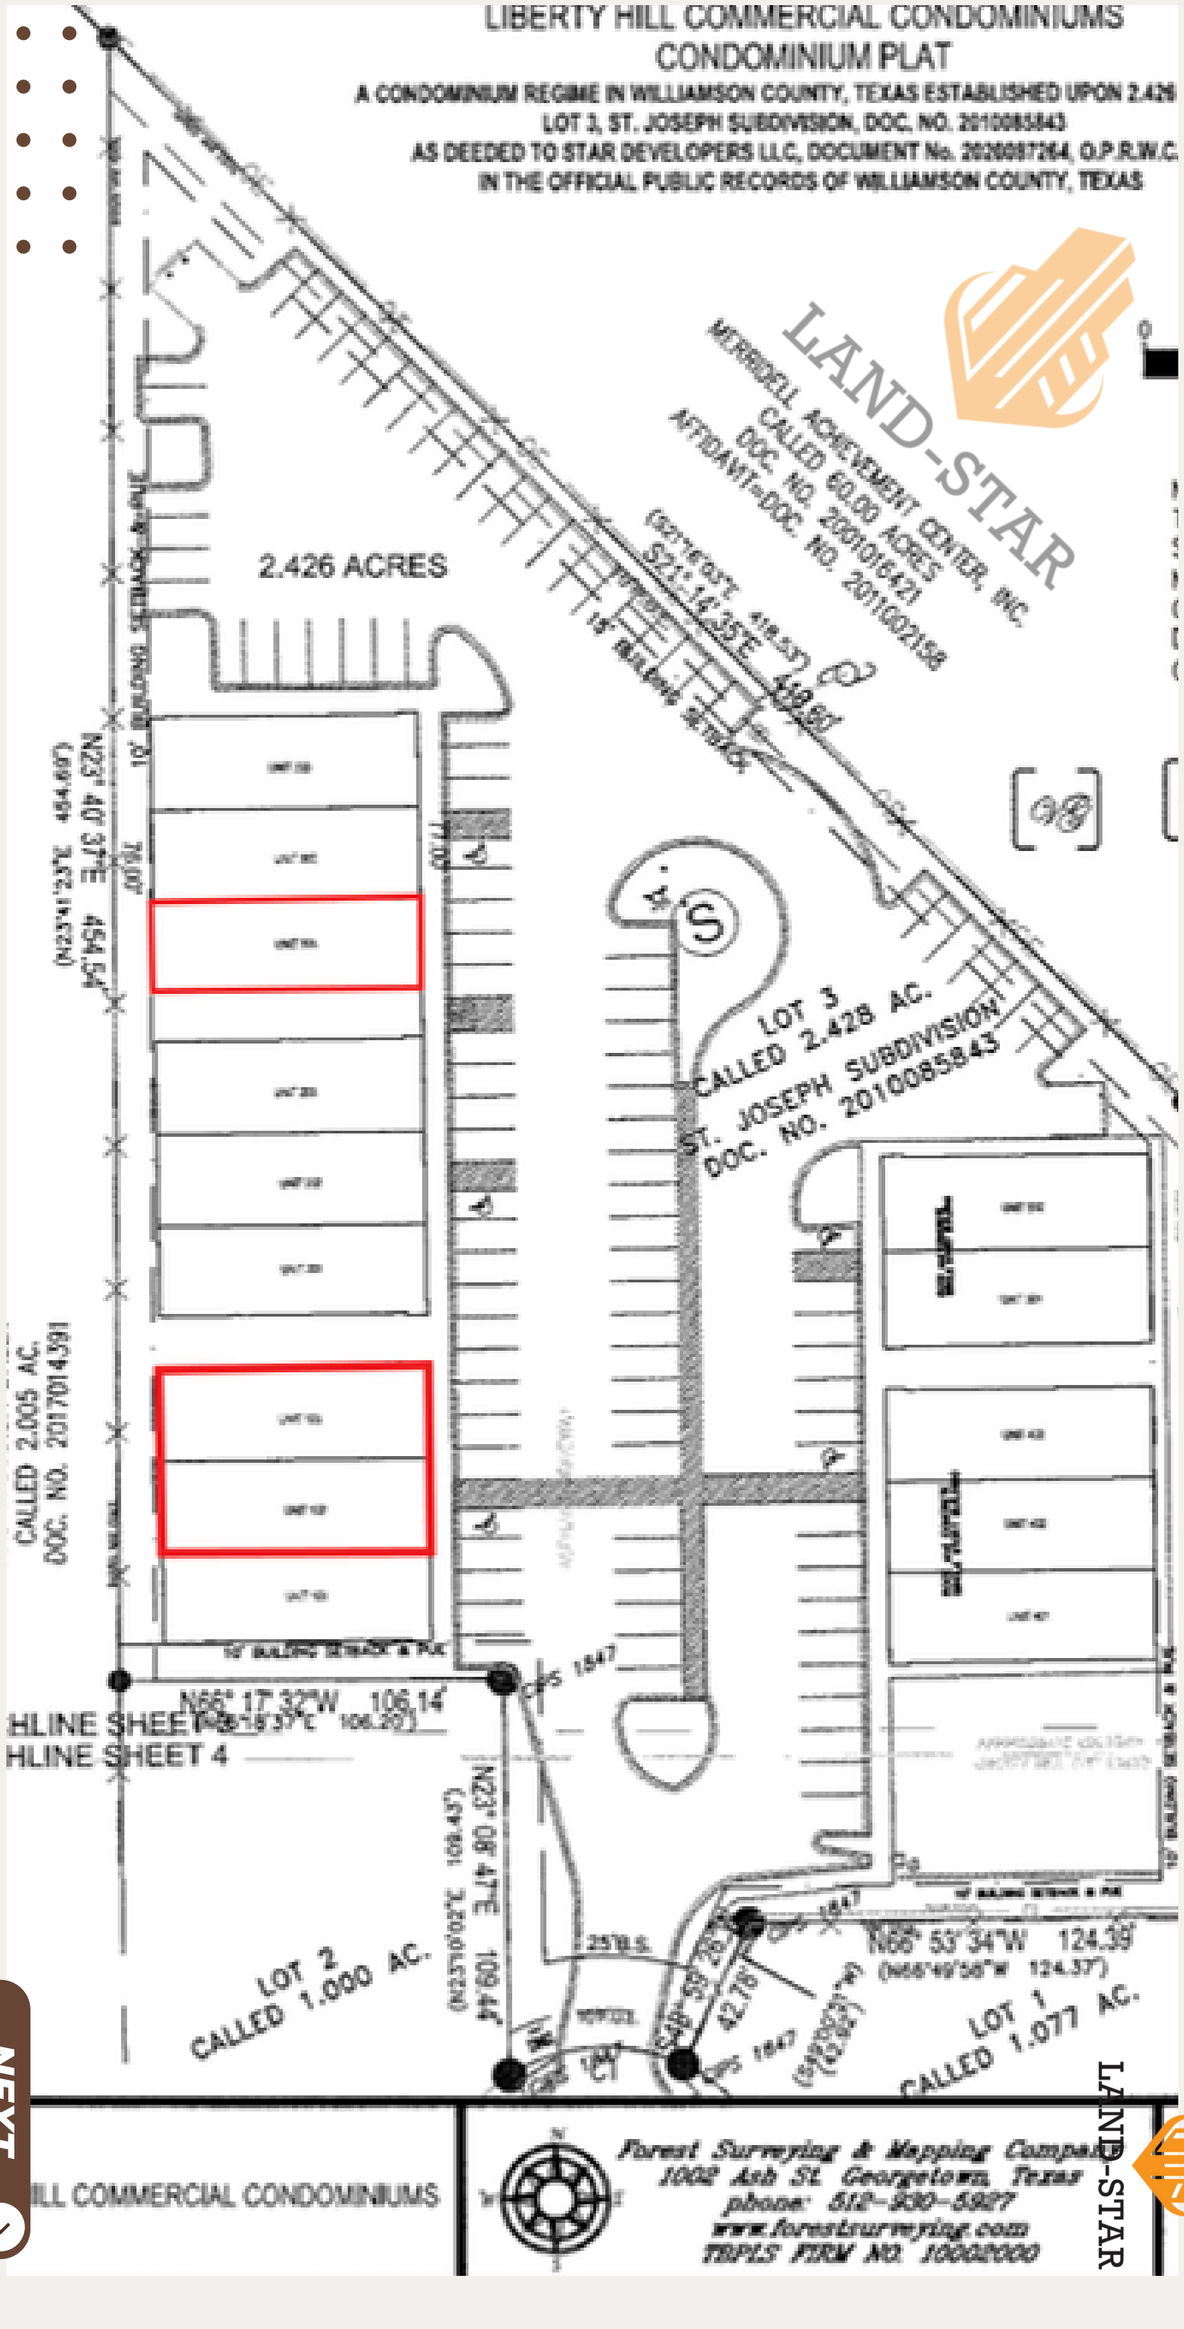

Those documents show the move could lead to nearly $200 billion in new investment and create more than 10,000 jobs.
Samsung is seeking tax breaks for building the facilities as part of the state's Chapter 313 incentives program.
